SUMMARY

- **Software Engineer** with **3 years** of experience building scalable enterprise applications and delivering production-grade solutions for BFSI platforms. Proven experience owning features **end-to-end**, optimizing system performance, mentoring engineers, and conducting code reviews. Strong foundation in Data Structures & Algorithms, **System Design**, Object-Oriented Design and **Distributed Systems**.

TECHNICAL SKILLS

Languages	: Java, Kotlin, Python
Frontend & Backend	: React JS, Spring Boot, REST APIs, Microservices
System Design & Architecture	: LLD, API Design, Design Patterns
Data & Caching	: MySQL, PostgreSQL, MongoDB, Redis
Cloud & Engineering Practices	: AWS (EC2, S3), CI/CD, JUnit, Mockito, Git, Maven, Data Structures & Algorithms, OOP
AI/LLM	: Prompt Engineering, LLM API Integration, GitHub Copilot

EXPERIENCE

Zoho

June 2023–June 2026

Member Technical Staff

Chennai

- Owned end-to-end delivery of enterprise CRM features for BFSI clients, from design and development to **deployment and production support**.
- Designed and developed a **metadata-driven no-code platform** with configurable UI components, reducing custom development effort and accelerating feature delivery.
- **Optimized database performance**, reducing repeated queries by 60%, resulting in faster processing times, reduced latency, and improved system responsiveness.
- Architected **reusable and configurable platform components**, enabling faster feature development while improving maintainability, scalability, and flexibility.

Zoho

Oct 2022 – May 2023

Project Trainee

Chennai

- Developed an **automated scheduling** feature integrating workflow automation and reminders (email, call, meeting), streamlining task management and boosting CRM operational efficiency.
- Engineered a customer data validation workflow that improved record accuracy and enhanced operational decision-making.

Amazon

Jul 2022 – Sep 2022

SDE Intern

Chennai

- Developed CSV to CBE Converter using batch processing, automating large dataset transformation into CBE format, thus **reducing data processing time by 40%** and improving integration efficiency.
- Engineered an Axon Framework-based duplicate detection system, removing redundant records, **improving data quality**, and enhancing financial reporting accuracy and compliance.
- Optimized the processing pipeline, increasing system throughput by 30% while handling millions of rows with low latency and minimal resource consumption.
- Developed **unit tests** with **JUnit and Mockito**, achieving **98% code coverage**, ensuring robust error handling supporting zero downtime in production.

PROJECTS

Distributed Rate Limiter

- Designed and implemented a **Redis-based distributed rate limiter** using the **Token Bucket algorithm** to regulate API traffic across multiple service instances and prevent system overload.
- Developed **REST APIs** for dynamic rate-limit configuration and optimized request processing for high-throughput backend systems with low latency.

Namelt – AI Project Naming Assistant

- Built a full-stack application using Spring Boot, React JS, and **LLM APIs** to generate context-aware project name recommendations through scalable backend services and real-time user interactions.
- Designed and integrated REST APIs with external **AI services**, enabling low-latency response generation and seamless frontend-backend communication.

EDUCATION

Anna University (R.M.D.)

B.E. in ECE

2019–2023

Chennai, Tamil Nadu

CGPA: 8.9

ACHIEVEMENTS

- Solved 500+ DSA problems and earned a 4-Star rating on **LeetCode**.
- Semifinalist in **TechGig Geek Goddess** Contest and in **Code Gladiators** 2023 Contest
